

MS Windows Live Mail (Windows 7)

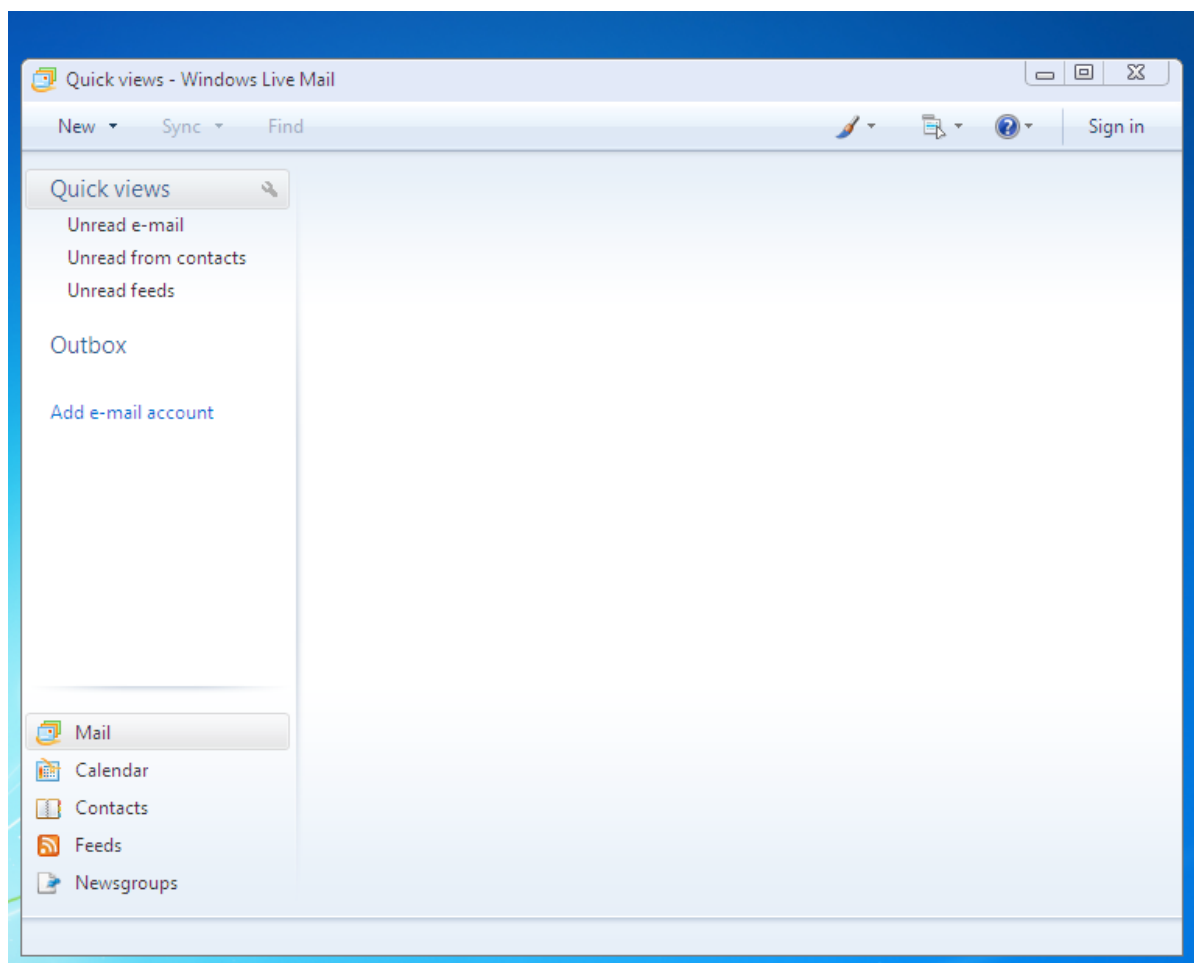

Noul sistem de operare de la Microsoft, Windows 7, nu are incorporat in kit-ul de instalare clientul de e-mail, avand acum si o noua denumire, Windows Live Mail. Insa acest program este oferit gratuit si se poate instala de pe site-ul dezvoltatorului.

Acest tutorial se doreste a fi un ajutor pentru configurarea unui cont de e-mail in programul MS Windows Live Mail. Acest tutorial va acoperi crearea conturilor de e-mail de tipul POP3 si IMAP.

Pasul 1. Se lanseaza programul Windows Live Mail.

Dupa lansarea programului, pentru configurarea contului de e-mail, se acceseaza din meniul principal optiunea "Add e-mail account" (partea din stanga a ecranului).

Pasul 2. Se deschide fereastra "Add an E-mail Account".

Add an E-mail Account

Please enter your e-mail account information below:

E-mail address:
example555@hotmail.com [Get a free e-mail account](#)

Password:
 Remember password

How should your name appear in e-mail sent from this account?

Display Name:
For example: John Smith

Manually configure server settings for e-mail account.

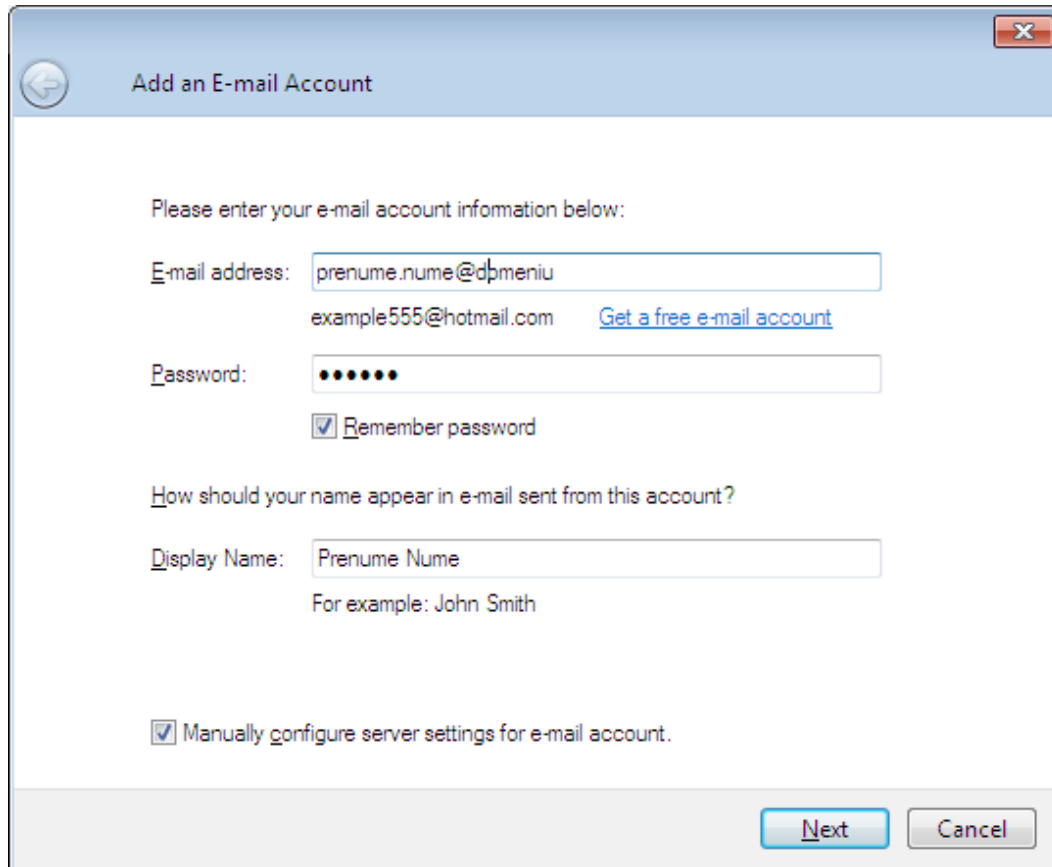

Next Cancel

Pasul 3. Introduceti adresa de e-mail si parola; aceste informatii va vor fi furnizate de catre echipa hostnow.ro.

Trebuie sa introduceti numele pe care doriti sa-l utilizati. De regula coincide cu numele dumneavoastra. Pentru exemplificare am ales: "Prenume Nume".

Introduceti numele in campul "Display Name" si bifati optiunea "Manually configure server settings for e-mail account".

Continuati prin apasarea butonului NEXT.

The screenshot shows a window titled "Add an E-mail Account" with a back arrow icon on the left and a close button on the right. The main content area contains the following elements:

- Text: "Please enter your e-mail account information below:"
- Field: "E-mail address:" with the value "prenume.nume@dpmenui". Below it, there is a link "example555@hotmail.com" and another link "Get a free e-mail account".
- Field: "Password:" with masked characters "••••••".
- Checkbox: "Remember password" (checked).
- Text: "How should your name appear in e-mail sent from this account?"
- Field: "Display Name:" with the value "Prenume Nume". Below it, there is a note "For example: John Smith".
- Checkbox: "Manually configure server settings for e-mail account." (checked).
- Buttons: "Next" (highlighted in blue) and "Cancel".

Pasul 4. In urmatoarea fereastră trebuie sa introduceti informatii legate de serverul de incoming si serverul de outgoing, precum si de login ID.

Selectati tipul serverului de incoming. hostnow.ro ofera atat conexiuni de tipul POP3, cat si IMAP. In functie de ceea ce doriti, alegeti una din cele doua optiuni.

Atat serverul de incoming, cat si serverul de outgoing sunt de forma: mail.domeniu (ex. mail.hostnow.ro).

Login ID il veti primi de la echipa hostnow.ro. In cazul nostru va fi "utilizator".

Where can I find my e-mail server information?

Incoming Server Information

My incoming mail server is a **POP3** server.

Incoming server: Port:

This server requires a secure connection (SSL)

Log on using: **Clear text authentication**

Login ID (if different from e-mail address):

Outgoing Server Information

Outgoing server: Port:

This server requires a secure connection (SSL)

My outgoing server requires authentication

Where can I find my e-mail server information?

Incoming Server Information

My incoming mail server is a **POP3** server.

Incoming server: mail.domeniu Port: 110

This server requires a secure connection (SSL)

Log on using: Clear text authentication

Login ID (if different from e-mail address):
utilizator

Outgoing Server Information

Outgoing server: mail.domeniu Port: 25

This server requires a secure connection (SSL)

My outgoing server requires authentication

Next Cancel

In cazul in care echipa hostnow.ro va solicita sa bifati optiunea "My server requires authentication" – aceasta optiune o gasiti aici.

Daca se recomanda conexiune criptata la server, trebuie sa bifati optiunea SSL atat pentru outgoing mail, cat si pentru incoming mail.

Pentru contul de tip POP3 se va alege portul 995, pentru IMAP se va alege portul 993 iar pentru SMTP portul 465.

Where can I find my e-mail server information?

Incoming Server Information

My incoming mail server is a **POP3** server.

Incoming server: mail.domeniu Port: 995

Next Cancel

Prin apasarea butonului NEXT finalizati configurarea contului.

Pasul 5. Apasati "Finish" pentru a iesi din configuratorul de conturi. **Felicitari!**

Puteti incerca sa va conectati la server pentru a testa conexiunea. Daca primit un mesaj de eroare ca in imaginea de mai jos insemna ca ceva nu este configurat bine, caz in care trebuie sa verificati setarile introduse.
